

# Introduction Course To TELETASK

## Trendsetter in Domotics-Home Automation provided by R3A Limited

TELETASK's aim is to improve comfort, security and energy management where it is needed the most, at home. Due to high level of integration and design our solutions are now also found in hotels and commercial buildings.

Today, TELETASK is focusing on residential energy balancing algorithms. The Future Smart Grid and the growing market of electrical cars makes the international need for intelligent houses with intelligent energy management a necessity. Today, all TELETASK systems are ready for this challenging future.

In this short webinar you will discover the basics of the TELETASK system and how it can be integrated into your own/clients houses. The TELETASK system is easy to operate, to maintain and can be remotely controlled by either your phone, tablet or computer.

Find out what you can integrate with the support of our system:

- Lighting, including full-colour control, power sockets
- Curtains, sun blinds, shutters, gates
- Access control, security
- Temperature control: Heating, cooling, and ventilation
- Audio, video, TV, home theatre
- Communication (door phone, cell phone, PC, internet)
- Gardening sprinklers, fountains
